INDIVIDUAL PROJECT

Agentyc for macOS

Solo designer & developer

 [View Website](#)

Agentyc is a zero-code AI agent playground for macOS. It empowers non-technical users to experiment with AI agent prompts, LLMs and Tools locally on their Mac without writing a single line of code. Powered by Microsoft AutoGen for agent orchestration.

PROFESSIONAL EXPERIENCE

Senior Product Designer at VMware Inc.

August 2018 to Present / Palo Alto, CA

Product Designer for Model Gallery and Model Runtime services. Responsible for the end-to-end UX to enable enterprises to deploy and manage LLMs on-prem. Collaborating with PMs and engineering leads to define product requirements. Designing and testing UI mockups and facilitating seamless handoffs to the engineering team.

Lead Designer for VCF Intelligent Assist: an AI copilot for VMware Cloud Foundation.

Collaborating with PMs to define strategy and roadmap. Creating design concepts to illustrate the vision to executives & stakeholders. Conducting hands-on testing and research into AI agents to bring agentic capabilities to VCF.

Lead Designer for VMware Genie: an AI-powered chatbot for employees. Conducted user research to identify employee and admin needs. Designed responsive and accessibility-compliant UI for the chatbot. Genie serves ~20,000 support tickets and month with a deflection rate averaging ~20%, reducing burden on human agents.

Product Manager & Lead Designer for VMware Genie Support Console. To enable Genie to save \$2.3M in operational costs and handle ~20% of customer support requests, defined the vision for Genie Support Console, presented strategy to leadership, conducted research to identify user needs and designed pixel-perfect mockups.

UX Designer at Juniper Networks
